Project Description: You are tasked with creating a responsive user interface using React.js. The UI design should be able to handle various screen sizes and devices while maintaining a clean and professional appearance. Your goal is to replicate a provided design using React components.

Requirements:

- 1. Use React.js to build the UI components.
- 2. Implement the provided design with precision, focusing on pixel-perfect representation.
- 3. Ensure the UI is responsive and adapts gracefully to different screen sizes.
- 4. Apply CSS to style the components, following best practices for maintainable and organized styles.
- 5. Pay attention to details, such as hover effects and transitions, to enhance the user experience.
- 6. Use Git for version control and submit your code in a Git repository.

Design: You can find the design mockup for the project attached in this pdf.

Evaluation Criteria:

- 1. Accuracy of design implementation.
- 2. Responsiveness across different screen sizes.
- 3. Code quality and organization.
- 4. Proper usage of React components.
- 5. Effective use of CSS styling.
- 6. Attention to detail and user experience.

Submission:

- 1. Clone the provided starter repository (if provided) or create a new repository for this task.
- 2. Commit your code regularly with descriptive commit messages.
- 3. Push your code to your chosen Git repository.
- 4. Provide clear instructions on how to run your project locally, if necessary.
- 5. Share the repository link with us when you're done.

Feel free to reach out if you have any questions. Good luck with the test task!
